CASE NARRATIVE

This hardcopy data package contains sample results and batch QC results for one soil sample received from the above referenced project. The sample was received cold and intact.

Organochlorine Pesticides: The TCMX surrogate recoveries for the method blank, laboratory control sample (LCS), and matrix spikes were outside acceptance limits. The associated decachlorobiphenyl surrogate recoveries were acceptable, therefore, there is no affect on the quality of the sample results.

The %RSD of the initial calibration of GC23 on 8/6/04 for endrin aldehyde and endosulfan sulfate from channel A, and for endrin aldehyde from channel B, were outside acceptance limits. The associated average %RSD for all compounds was acceptable on both channels, therefore, there is no affect on the quality of the sample results.

The endrin breakdown % for the performance evaluation monitoring standards (PEMs) 219_048, 222_007, 222_022, and 223_004 were above acceptance limits on channel A. Endrin and its associated breakdown products were not detected in the associated sample, therefore, there is no affect on the quality of the sample results.

The %D of the continuing calibration standards were outside acceptance limits for many individual compounds. The affected compounds have been flagged with a "b" as per the method. The associated average %D for all compounds was acceptable on both channels in all CCSs except CCS 222_009 which was above acceptance limits on channel A. No target compounds were detected in the associated sample, therefore, there is no affect on the quality of the sample results. No other analytical problems were encountered.

PCBs: No analytical problems were encountered.

Metals: The matrix spike recoveries for antimony, chromium, copper, and zinc, the matrix spike duplicate recovery for antimony, chromium, and vanadium, and the matrix spike duplicate relative percent difference (RPD) for copper, were outside acceptance limits. The associated blank spike recoveries and blank spike duplicate RPDs were acceptable for all target elements and the spiked sample was not from this site. No other analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample results and batch QC results for two soil samples received from the above referenced project. The samples were received cold and intact.

Organochlorine Pesticides: Both surrogate recoveries were above acceptance limits for sample BB3EX109[0.5] (173875-001). No target compounds were detected in the associated sample, therefore, there is no affect on the quality of the sample results.

The TCMX surrogate recoveries for the method blank, laboratory control sample (LCS), and matrix spikes were outside acceptance limits. The associated decachlorobiphenyl surrogate recoveries were acceptable, therefore, there is no affect on the quality of the sample results.

The %RSD of the initial calibration of GC23 on 8/6/04 for endrin aldehyde and endosulfan sulfate from channel A, and for endrin aldehyde from channel B, were outside acceptance limits. The associated average %RSD for all compounds was acceptable on both channels, therefore, there is no affect on the quality of the sample results.

The endrin breakdown % for the performance evaluation monitoring standards (PEMs) 219_048, 222_007, 222_022, and 223_004 were above acceptance limits on channel A. Endrin and its associated breakdown products were not detected in the associated sample, therefore, there is no affect on the quality of the sample results.

The %D of the continuing calibration standards were outside acceptance limits for many individual compounds. The affected compounds have been flagged with a "b" as per the method. The associated average %D for all compounds was acceptable on both channels in all CCSs except CCS 222_009 which was above acceptance limits on channel A. No target compounds were reported from channel A, therefore, there is no affect on the quality of the sample results. No other analytical problems were encountered.

PCBs: The matrix spike recovery of aroclor-1260 was outside acceptance limits. The associated LCS recoveries were acceptable for all target compounds, therefore, there is no affect on the quality of the sample results. No other analytical problems were encountered.

Metals: The matrix spike recoveries for antimony were outside acceptance limits. The associated blank spike recoveries were acceptable for all target elements and the spiked sample was not from this site.

The serial dilution sample analyzed on 8/9/04 at 07:57 was outside acceptance limits for arsenic. No other analytical problems were encountered.

Client:	**Treadwell & Rollo**
Project:	**2893.12**
Location:	**Presidio**
Request Date:	**08/18/04**
Samples Received:	**08/18/04**

This hardcopy data package contains sample and QC results for five soil samples, requested for the above referenced project on 08/18/04. The samples were received cold and intact.

Pesticides (EPA 8081A):
High ICAL percent RSDs (relative standard deviations) were observed for beta-BHC, delta-BHC, and endosulfan sulfate in the calibration analyzed 08/18/04 01:59; average ICAL %RSD met method requirements, and these analytes were not detected in the associated samples. High ICAL percent RSDs (relative standard deviations) were observed for endosulfan sulfate and endrin ketone in the calibration analyzed 08/19/04 22:41; average ICAL %RSD met method requirements, and these analytes were not detected in the associated samples. Low responses were observed for 4,4'-DDT and methoxychlor in the CCV analyzed 08/20/04 00:50; average CCV drift met method requirements. High response was observed for methoxychlor in the CCV analyzed 08/20/04 16:12; average CCV drift met method requirements, and this analyte was not detected in the associated samples. No other analytical problems were encountered.

PCBs (EPA 8082):
Low surrogate recovery was observed for decachlorobiphenyl in the MSD for batch 93858; the parent sample was not a project sample. No other analytical problems were encountered.

Metals (EPA 6010B):
Low recoveries were observed for antimony and vanadium in the MS/MSD of BB3EX111[0.5] (lab # 174073-001); the BS/BSD were within limits. The serial dilution sample analyzed on 8/19/04 at 08:23 was outside acceptance limits for copper. No other analytical problems were encountered.

1. Difficult to concentrate to 1.0 mL.
2. Extract is dark color
3. Extract is sticky
4. Heterogenous matrix.
5. Too much precipitate during extraction.
6. There is an oil layer above the sample.
7. Mixture of soil & water.
8. BN-extract is interfered, A-extract only.
9. Sample has strong stink
10. Some solvent suspected
11. special color, specify

* For double extract analysis (ABN), $f_> = \max[f_A, f_B]$ and $f_< = \min[f_A, f_B]$, where f_A, f_B are f_1 for A and BN extracts, respectively. The values in () is the typical case for 625/8270 ABN analysis.

CASE NARRATIVE
PCBS (EPA 8082)

Laboratory number:	174320
Client:	Treadwell & Rollo
Project:	2893.12
Location:	Presidio Baker Beach 3
Request Date:	08/30/04
Samples Received:	08/30/04

This hardcopy data package contains sample and QC results for four soil samples, requested for the above referenced project on 08/30/04. The samples were received cold and intact.

PCBs (EPA 8082):

Low recovery was observed for Aroclor-1016 in the MS of BB3EX118[0.5] (lab # 174320-002); the LCS was within limits, and this analyte was not detected in the associated samples. High RPD was also observed for Aroclor-1016 in the MS/MSD of BB3EX118[0.5] (lab # 174320-002); this analyte was not detected in the associated samples.

Low surrogate recoveries were observed for decachlorobiphenyl and TCMX in BB3EX118[0.5] (lab # 174320-002) and the MS/MSD of BB3EX118[0.5] (lab # 174320-002), due to matrix interference.

No other analytical problems were encountered.

Project:	2893.12
Location:	Presidio Baker Beach 3
Request Date:	08/30/04
Samples Received:	08/30/04

This hardcopy data package contains sample and QC results for four soil samples, requested for the above referenced project on 08/30/04. The samples were received cold and intact.

Pesticides (EPA 8081A):

High ICAL percent RSD (relative standard deviation) was observed for endosulfan sulfate in the calibration analyzed 08/19/04 22:41; average ICAL %RSD met method requirements, and this analyte was not detected in the associated samples.

High response was observed for methoxychlor in the ICV analyzed 08/20/04 03:05; this analyte was not detected in the associated samples.

Low response was observed for 4,4'-DDT in the CCV analyzed 08/31/04 21:16; average CCV drift met method requirements.

High response was observed for 4,4'-DDE in the CCV analyzed 08/31/04 11:42; average CCV drift met method requirements, and this analyte was not detected in the associated sample.

No other analytical problems were encountered.
